

HOW CAN YOUR HOME BE AN ENERGY SAVER?

SWITCH TO PRODUCTS THAT USE A LOT LESS ENERGY!

1. GO ENERGY STAR

The ENERGY STAR label means a product uses less energy. Look for it on laptops, TVs, dishwashers, refrigerators and more.

2. SWITCH ON THE SAVINGS

Energy-efficient light bulbs save a lot of energy.

3. DON'T HEAT THE OUTDOORS

A drafty home means you're losing a lot of heat and wasting a lot of energy. Insulating your home's walls and sealing air leaks can save a lot of energy.

4. LOW-FLOW SHOWERHEADS = BIG TIME SAVINGS

Certain types of showerheads and faucets mix air with water and they can save a lot of hot water and energy.

5. DIAL UP THE SAVINGS WITH PROGRAMMABLE THERMOSTATS

Programmable thermostats save energy by automatically turning down the heat while you're at work, school or sleeping, and turning it back up before you return home or wake up.
